

Toro® Anti-Bobbing Roller

GREENSMASTER® RIDING GREENS MOWERS

FEATURES

- Anti-Bobbing Rollers virtually eliminate the "wavy cut" issue and help provide the smoothest cut in off-greens applications
- Allows a faster mowing speed, up to 5.5 mph (8.8 km/h), for increased productivity
- The benefits of mowing greens surrounds with a light weight machine with smooth tires helps bentgrass thrive
- The Anti-Bobbing Roller Kit comes with a 3" (7.6 cm) front wide Wiehle roller and a 2 3/8" (6 cm) solid rear roller to equip one DPA cutting unit

Improve aftercut appearance on approaches & fairways.

Toro's anti-bobbing roller solves the age-old problem of the "wavy cut" typically seen in greens surrounds and fairway applications, regardless of the make or model of triplex greens mower used. This wavy cut results in undesirable light/dark shades repeating every 8 inches (20 cm) or so. Typical causes are excessive mowing speeds and/or very soft turf and is more pronounced during vigorous growth periods.

Toro engineers discovered the cause of bobbing to be a ground-induced vibration which makes the cutting unit unstable at a certain frequency. To neutralize this, they created a roller that utilizes an internal "tuned mass dampener" consisting of a spring and a suspended weight ballast inside the roller. The solution is the anti-bobbing roller, which allows mowing at a faster speed, increasing productivity, while providing an excellent after-cut appearance at higher heights of cut.

The "Tuned Mass Dampener" system inside Toro's anti-bobbing rollers

Recommended for use on Greensmaster 3150-Q and 3250-D models equipped with DPA cutting units.
